

Frontend Developer Intern — Take-home Assignment

Role:	Frontend Developer Intern
Duration:	2 days
Submission:	GitHub repository link + README

Overview

Build a small web application related to getting fresh groceries to people's doors. This assignment is intentionally open-ended. We are not looking for a perfect product; we are looking for how you think, how you structure your work, and how you handle the details.

Read the requirements below carefully. Build only what is asked — no more, no less.

The Task

Build a simple grocery ordering page with the following sections:

1. Product Listing

- Show a list of grocery items. Each item should display its name, category, price, and available unit (e.g., 500g, 1 dozen).
- The user should be able to filter items by category.
- If an item is out of stock, it should look different from available items, and the user should not be able to add it to the cart.

2. Cart

- The user can add items from the product listing to their cart.
- Adding the same item twice should increase its quantity, not create a duplicate entry.
- The user can increase or decrease the quantity of an item in the cart, or remove it entirely.
- Show how many items are currently in the cart at all times.

3. Order Summary

- Show a breakdown of all items in the cart, their quantities, and individual prices.
- Show the subtotal, a flat delivery charge of ₹40, and the final total.

- There should be a button to place the order. When clicked, the cart should clear, and the user should see a confirmation message.
- If the cart is empty, the place order button should not be active.

Product Data

Use the following items as your data. You do not need to fetch this from anywhere — include it directly in your project.

Item	Category	Price	Unit	Stock
Tomatoes	Vegetables	₹30	500g	In stock
Spinach	Vegetables	₹25	250g	In stock
Bananas	Fruits	₹45	Dozen	In stock
Apples	Fruits	₹120	1 kg	In stock
Whole Milk	Dairy	₹60	500 ml	In stock
Paneer	Dairy	₹90	200g	Out of stock
Brown Eggs	Dairy	₹80	6 pcs	In stock
Coriander	Herbs	₹15	Bunch	In stock

What to Submit

- A link to a public GitHub repository with your code.
- A README file that explains how to run the project locally.
- In your README, briefly describe how you have structured the project and why.

Submission Deadline

Please fill out the Google form with your GitHub link within the time given.

We look forward to seeing your work. Good luck!
